Overview

Canto® Cumulus RedDot Bridge offers the benefits Cumulus can provide to RedDot® CMS users. It integrates Cumulus with RedDot CMS. It makes powerful Web Content Management and limitless Digital Asset Management working as one. RedDot CMS enables you to easily publish your files over the Web. And though the Web is certainly the world's largest audience, it's not your only audience. Your assets are useful for far more. By adding Cumulus to your RedDot CMS system, your websites can now include the very same rich media asset files, such as video, audio, PDF or even Microsoft® Office files that are centrally accessible to your entire enterprise.

Installation

Integration and/or configuration services from Canto Professional Services or a Canto partner are recommended.
