

Cumulus® 8.0.1 Release Notes

Workgroup / Enterprise / Web Publisher Pro / Internet Client Pro / HELIOS Companion 8.0.1 (Mac OS X / Windows / Unix)

The Cumulus version 8.0.1 is an update that improves all Cumulus products, including Workgroup, Enterprise, HELIOS Companion and the Cumulus Web clients. With this release, Canto's Cumulus is now more stable and efficient across all platforms for which it is developed. For details concerning the bugs, which have been fixed with this release, please refer to the following list.

ADDITIONAL NOTE: Additional modules created with the Cumulus SDK 7.0 could not be loaded with Cumulus 8.0 or later. If you rebuilt such modules with the Cumulus SDK 8.0 or later, they can be loaded. Note that an updated Cumulus SDK is now available. Please contact Canto's CDP team.

New Feature: Digital Camera Raw filter now supports Leica D-Lux 4 RAW assets.

Bug Fixes

These fixes have been done between 8.0.0 and 8.0.1.

W = Workgroup Edition; E = Enterprise Edition, ICP = Internet Client Pro; WPP = Web Publisher Pro

<i>W = Workgroup Edition; E = Enterprise Edition, ICP = Internet Client Pro; WPP = Web Publisher Pro</i>	Other Platform all, except if specified below	Description
Software all Editions, except if specified below)		Keyword list is now properly displayed in Report View.
Client		The Information Window now also merges field values for the fields "Related Master Assets" and "Related Sub Assets".
Client		New menu option of the Metadata menu enables the user to create a new master category directly under the catalog root category.
Client		The Category Find Window now shows the "really" found categories and does not count the grayed categories and the root catalog category anymore.
Client		In the server catalog list the Open button for catalogs that are marked to be damaged is now disabled.
Client		Now the Preview window always opens with a minimum size that is large enough to show the complete toolbar.
Client		When calling the menu option "Asset >QuickTime Movie > Create And Play" and the movie preview runs, the menu submenu node "View / Preview" is enabled now to use the zoom commands. The preview is also zoomed correctly now.
Client		In the Category Information window long field names are now displayed shortened in the same way as in the Record Information window.
Client		Copy & Paste using keyboard shortcuts (CTRL+C, CTRL+V) now also works in edit fields in File Format Filters and Asset Processors Properties dialogs.

Cumulus® 8.0.1 Release Notes

Client		The "Metadata Template" button is now available with all Info views.
Client		Now it is possible to drag & drop an image from Cumulus to Adobe InDesign into a rectangle box which is fully inside a text box. The image is placed in the rectangle box, even if it overlaps the text box. Dropping the image over the text box itself, will now create a new image object in InDesign.
Client		If creating a new catalog takes a while now a progress bar is displayed.
Client		When cataloging PPTX documents, the created thumbnails and previews are correct now. The preview titles for such assets is also correct now.
Client		A user can now delete a user comment if he has only the view and delete permission on the sub table, independent from the permission on the main records table.
Client		If a user has not the required permissions to add user comments, the corresponding button is disabled now.
Client		The Client application now responds properly while opening the Properties dialog of the Watermarking AssetProcessor in an Asset Action.
Client		The quality of the standard watermark image was increased.
Client		A permission on a sub table is now independent from the appropriate permission on the main record table.
Client		Cataloging or previewing special swf files will no longer cause the Client application to quit unexpectedly.
Client		When printing the Report View, the fields' text no longer overlaps the thumbnail.
Client		When trying to rename a Master Category to an existing Master Category name, an error message is displayed now.
Client		The Info Window now updates the list of assigned categories correctly after navigating to next record.
Client		Now it is possible to assign a label if the label field is not shown, but configured to be used as background color for the record name or entire record.
Client		Now it is possible to print records with Print Sets that contain a lot of spaces at the end of a string.
Client		Even if the Asset Reference in the Central Asset Location can not be resolved, the Catalog Settings in the Preferences dialog will display immediately.
Client		The PowerPoint filter does no longer catalog Word files.
Client		In the Metadata Editor categories can now be removed.
Client		It is no longer possible to configure the Central Asset Location for more than one catalog as "Always and Exclusive". Note that this bug fix requires updating the Vault on server and client side.
Client		Now an error message is displayed when a user tries to catalog into Cumulus Vault using an Asset Handling Set that has the Vault Assert Store not activated.
Client		The record import function ("Cumulus 5-7- Format") will now also assign category values and String List values are also imported properly now.

Cumulus® 8.0.1 Release Notes

Client		Checkmarks for a multi select string list are now displayed correctly for all entries.
Client		Split View will now properly restore the sorting after quit/restart.
Client		The error 1002 is no longer shown when the Category Info Pane for the catalog category is displayed.
Client		If the duplicate check finds a record that contains a checkout asset reference which is not resolvable, the asset will be cataloged properly now.
Client		Auto Cataloging now applies the Preference Setting "User Settings / General / Application / Show Auto Cataloging Window". If the option is set to hide then this setting will be overwritten by the option "Show Metadata Editor for New Records" in case it is set to on.
Client		After reopening via collection file or switching on the User Filter bar it is now always displayed expanded, so the user can always edit or delete conditions immediately.
Client		A damaged catalog can now be repaired in the "Select Catalog" dialog for the Cumulus Administrator.
Client		Now the proxy thumbnail orientation is drawn correctly in Full Screen Preview.
Client		The preview size is now initially limited to the Full Screen Preview panel size.
Client		All context menu entries are now enabled and disabled according to the current selection.
Client		The PDF library now handles layered PDFs from Adobe InDesign CS4 correctly.
Client		Record export ignores the invalid XML character "" now. In this case the XML file is correctly now.
Client		Category assignments of a Cumulus 6 catalog are now properly migrated.
Client		Now the permission "ManageUser Queries" is used properly for categories or records.
Client		When changing the workspace the User Live Filter is now correctly shown as active/inactive.
Client		The order of slides in a presentation created with the PowerPoint AssetProcessor now properly resembles the order of the selected items.
Client		When merging PPTX slides to PowerPoint presentation with the Office Open XML Asset Processor the resulting presentation can now be opened without problems in PowerPoint.
Client		Delete Records command in the full screen preview is no disabled if the user has the appropriate permission.
Client		Workspace names are no longer cut off at the first '0'-character.
Client		The Office Open XML Asset Processor now always uses the chosen file name.
		Now it is always possible to create a new category under the catalog root category in the "Categories" tab.
Client		PDF Page Merge AssetProcessor: If a user didn't configure a file name for the resulting PDF, an error message is displayed now.

Cumulus® 8.0.1 Release Notes

Client		Trying to add a catalog to the list of catalogs managed by a Cumulus Server which is already included in the list will display the message "The chosen file is already added to the catalog list." now.
Client		Preview and Record view no longer flicker when using the mini preview pane and showing a preview of a "variant" or "alternate" record in the Sub Pane.
Client	Mac OS X	With the Option key hold down while a drag starts the asset reference is resolved. This will be the default if <code><ns: ResolveWhenDragStarts>1</ns: ResolveWhenDragStarts></code> is set in the client xml file. This allows opening the original file (not a temporary copy) in applications (e.g. Photoshop) by a simple Drag and Drop.
Client	MAC OS X	The keys Command + / Command - / Command 0 and Alt Command 0 are now handled correctly in Fullscreen Preview.
Client	Mac OS X	The mini Info Panel and the Info View in the main record view and the subview are getting focussed if you click on a non-focusable String List popup (including the Label field).
Client	Mac OS X	If the Report view includes field names, the background around the field names is now erased properly for the selected items.
Client	Mac OS X	Even if Safari 4 is installed, the CumulusTool will no longer unexpectedly quit when cataloging HTML files.
Client	Mac OS X	Now it is possible to close a collection or quit the Client in case a CumulusTool has unexpectedly quit.
Client	Mac OS X	Scrollbars of fields in the Information pane are no longer painted into the Status Bar.
Client	Mac OS X	The Client no longer unexpectedly quits when dragging a category below the Record view outside the window.
Client	Mac OS X	The quick search hint "enter search criteria here" is no longer missing in the toolbar when you have a catalog open.
Client	Mac OS X	The PDF Page Merge AssetProcessor now adds all items of a selection to the resulting PDF file.
Helios Companion		Moving a file from a cataloged folder into a new folder where no folder category exists under \$Sources works properly now.
Helios Companion		Creating a new folder on a watched volume works properly now.
Scheduler		Cumulus Scheduler is now installed in the correct directory on 64bit Windows platforms.
Server		The Users catalog now includes the "Show Original" permission for the guest and sample user.
Server		The Cumulus Server no longer unexpectedly quits when a client opens a catalog with a Record Live Filter that is based on the Categories Live Filter Query-.
Server		Implicit migration of catalogs no longer damages the field linking of some fields.
Server		Formula fields are calculated correctly also for string fields where the first field value is empty.
Server		Even if a record field that is selected a sort criteria has been modified, it will now always be displayed at the correct position.
Server		The JavaVM on the Cumulus Server is now started with the <code>-Djava.awt.headless=true</code> option.

Cumulus® 8.0.1 Release Notes

Server		User-sorted auto-collection now preserve the order of records.
Server		Cumulus Server no longer unexpectedly quits even if the conf folder contains a corrupt XML file.
Server	Mac OS X, Solaris	The symbolic link for the CumulusTool is now created correctly.
WPP / ICP		The context menu for the Cumulus Administrator now offers all commands even if the field "Check Out Location" is missing.
WPP / ICP		Showing the category information in WPP/ICP no longer cancels the session.

For developers only:

SDK		A collection that was returned as a table field value is sortable now.
